Appellant's Appeal Brief, filed on November 17, 2007, has been carefully considered. Claims 1, 3-8, and 13-16 were under appeal, and are presently pending in this application.

Withdrawn Rejections

The 103(a) rejection of claims 1, 3-8, and 13-16 as being unpatentable over Voss et al. (U. S. Patent Application Publication No. 2003/0124037) in view of Canadian Patent No. 2,299,602 has been withdrawn in view of the persuasive arguments stated in the Appeal Brief.

Allowable Subject Matter

1. Claims 1, 3-8, and 13-16 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest the claimed method for making a diesel particulate filter, wherein a wall-flow substrate (comprising an inlet channel, an outlet channel, and a porous wall separating the inlet and outlet channels, and characterized by pores having an average pore size between 5 micrometers and 500 micrometers) is provided, and sized catalyst-bearing particles are applied to the inlet wall surface of the wall-flow substrate (and not the outlet wall surface thereof) by

applying a slurry comprising the sized catalyst-bearing particles and calcining to cause said catalyst-bearing particles to cause said particles to penetrate within the pores of the porous wall to a distance not greater than about 25% of the thickness of the porous wall.

The sized catalyst-bearing particles are formed by applying a promoter oxide compound onto refractory inorganic oxide particles by forming a slurry of refractory inorganic oxide particles dispersed in a solution containing a precursor of said promoter oxide compound and calcining to form the promoter oxide compound, and depositing the promoter oxide compound onto the refractory inorganic oxide particles to form supported promoter particles, impregnating the supported promoter particles with a noble metal catalyst to form catalyst-bearing particles, and sizing the catalyst-bearing particles to an average particle diameter of about 2 micrometers to about 10 micrometers, wherein the particle size is about 10% to about 80% of the average pore size.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
